

Figure 9.8: Standard deviation of monthly average vertical velocity from 10-case ensemble control simulations: (a) and (b) are meridional average (from 15°S to 15°N) in January and July respectively; and (c) and (d) are zonal average (90°E to 150°E) in January and July respectively. The study area is 90° to 150°E (bar).
