So, where to begin? A huge thanks goes to all of my supervisors: Phil Jones, for all the patience, advice and lightning speed at returning my written work; Pete Thorne, for giving me so much time and support whenever I needed it, even if it meant trekking up and down CRU stairs on crutches, for looking after me at the Met Office and also cheering me up when I broke my arm; to Nathan Gillett for helping with the stats and IDL work; and Tim Mitchell for getting me started on the data. The advice, enthusiasm and support I've had from all of CRU and the Climate Variability group at the Hadley Centre has been absolutely essential. A special mention goes to Philip Brohan at the Hadley Centre for painstakingly taking me through the Marine Data System and always being happy to help whenever I needed it. Mark McCarthy has also been of great help in terms of getting to grips with humidity. I'd also like to thank Russ Vose and Neil Lott at NCDC for the use of their data and their support throughout.

I cannot thank Mike Salmon enough for the endless amounts of time he has spent answering my queries, patching together my computer and getting me out of tricky computing situations. I'm not quite sure what we'd do without him in CRU.

Thanks to all my friends at UEA, especially the regular 10.30 coffee goers (Carol, Jade, Oli, Matt, Sian and Debbie) for keeping things really fun, relatively stress free, always being up for doing 'fun things' and putting up with my grumps and stresses. Thanks to all my new friends at the Met Office too who made me feel really at home there. A special mention to Aye-Aye, Second Wind and Mustard for being loads of fun and seeing me through darker times. Thanks to my office mates too for putting up my mess of a desk and random sports kit everywhere.

A big thanks to my family for being really understanding, always enthusiastic and just generally great.
